MERCHANDISING WITH DYNALINE

- Takes up less space
- Clean, organized displays
- Easy to manage inventory
- Earn more per square foot
- Well-researched product mix
- Quick setup, fully customizable

A display solution for every category

Gondolas

Each gondola is carefully designed based on market research, so it has the right mix of products and makes shopping and stocking easier and faster for both your staff and customers.

End Caps

The end of the aisle is prime real estate. It's a great spot for bestsellers, promos, or new items because customers see them right away and are more likely to stop, grab what they need, and keep moving.

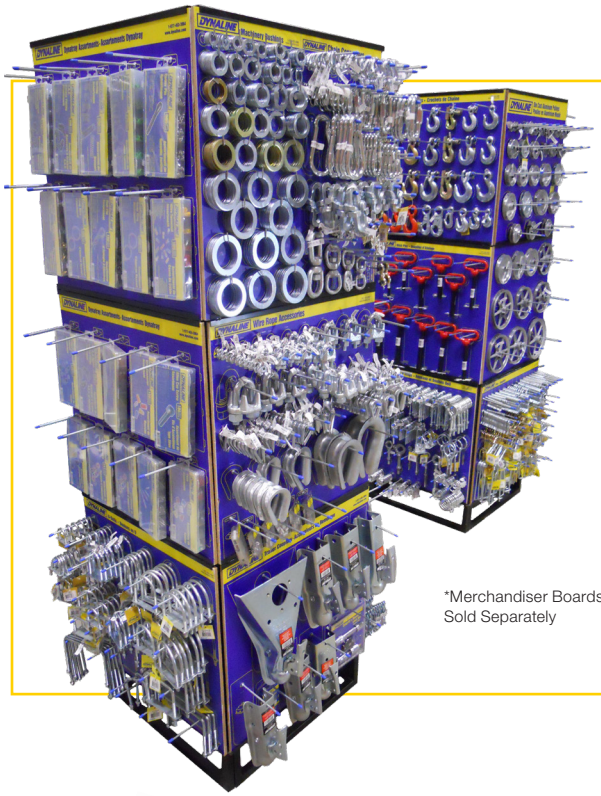

Counter-top Displays

Counter-top displays work great for Boss products, especially smaller items like driver bit kits. We also offer a rotating counter-top display, so customers can see everything without taking up more counter space. Clear signage makes it easy to find what they're looking for, with some options that can be customized.

Free Standing Racks

The free standing merchandisers are our best-selling and most versatile display solution.
Retailers choose it for its compact footprint, easy setup, and ability to display multiple product types.

Stands

Heavy ball mounts, long cable pullers, load binders, and loose chain can be tricky to display. Our stands are built to handle these bulky or oddly shaped items, keeping them sturdy, easy to access, and neatly arranged so aisles stay clear and shopping stays simple.

Tables

Tables are designed for impulse-buy items, making it easy for customers to browse and pick up last-minute add-ons. Clear signage calls out value pricing to help drive quick purchase decisions. With our no-risk guarantee, slow movers can be returned and replaced with faster-selling products at no cost - see the Impulse Buy category section for full details.

Plan-O-Grams

Plan-O-Grams are backdrop guides that take the guesswork out of setting up shelves. They show exactly where products should go so everything is visible and easy for customers to grab. The layouts are simple to follow and flexible for your space.

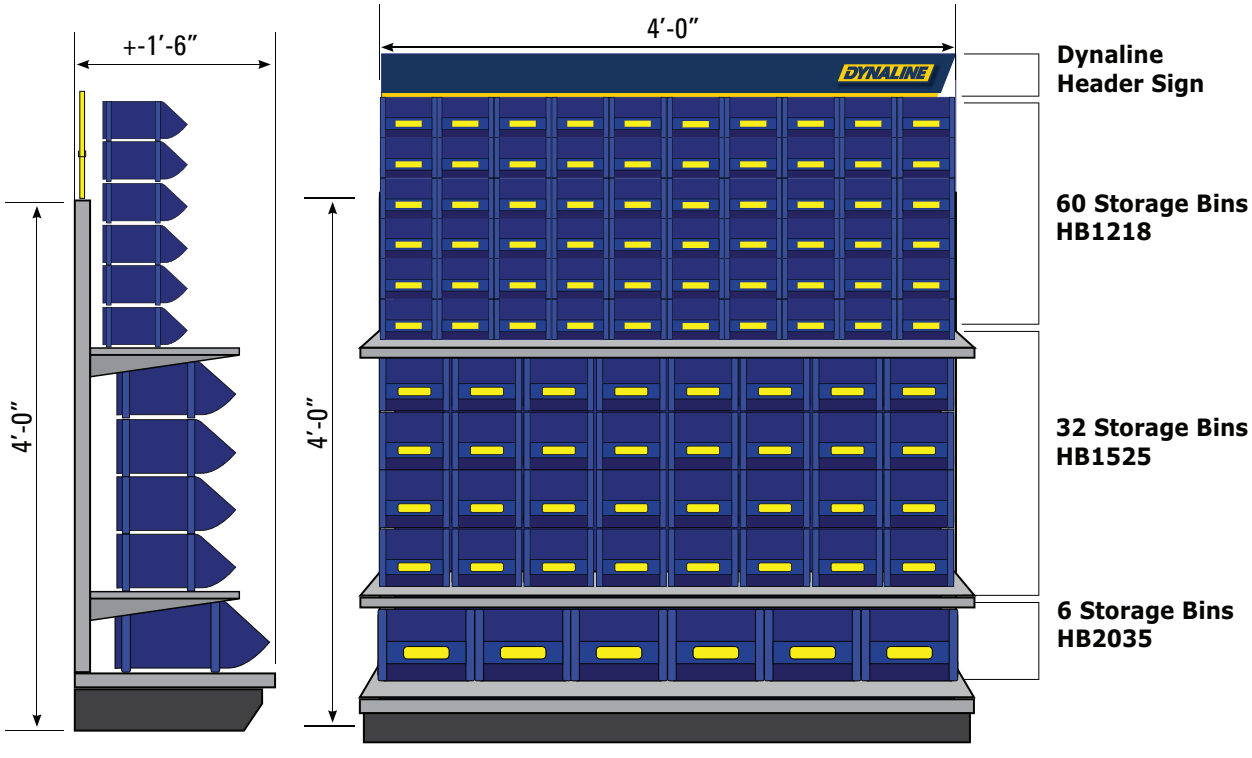

Bins

Our Custom bulk bin merchandising program allows you to stock bulk products that fit your local market.

Your Dynaline Account Manager works with you to identify your top sellers, customer demand, and common stock gaps, then creates a product mix that fits your market. From there, Dynaline plans the layout, selects the right bin sizes, and allocates space for each product, delivering a complete merchandiser ready to go on your floor.

Dynaline supplies everything you need to make your display look clean, full, and professional.

- The right bin sizes for every product
- Matching riser pins
- Printed bin labels
- Clear product identification
- Merchandiser headers with Dynaline branding

Custom Bulk Bin Features

Once a product category or layout is determined, Dynaline will assemble your custom merchandiser and determine how many products it will need. We offer multiple bin sizes to ensure all your products will fit and look presentable to your valued customers.

We will ship all the bins you need including riser pins so your customers have easy access to your products. All bins sizes have corresponding risers so you aren't limited in your selection.

Dynaline will print out any labels you need for your custom merchandiser. We will also print merchandiser headers for your display giving your customers confidence that the products you offer are provided by the trusted Dynaline brand.

Buna-N Rubber is also referred to as **Nitrile Rubber**. Nitrile rubber is a copolymer of butadiene and acrylonitrile. In addition to its excellent elastomeric properties, it is resistant to oil, caustics, and aliphatic hydrocarbons. Nitrile is not suitable for solvents and chlorinated hydrocarbons. Its maximum temperature limit is 212º F.

Viton is a brand of synthetic rubber and fluoropolymer elastomer commonly used in O-rings and other molded or extruded goods. Viton fluoroelastomers are categorized under the ASTM D1418 and ISO 1629 designation of FKM. This class of elastomers is a family comprising copolymers of hexafluoropropylene (HFP) and vinylidene fluoride (VDF or VF2), terpolymers of tetrafluoroethylene (TFE), vinylidene fluoride (VDF) and hexafluoropropylene (HFP) as well as perfluoromethylvinylether (PMVE) containing specialties. The fluorine content of the most common Viton grades varies between 66 and 70%.

What is Nitrile (Buna-N NBR)?

- Nitrile rubber is the general term for acrylonitrile butadiene terpolymer
- The acrylonitrile content of the nitrile sealing compounds varies considerably
- The higher the acrylonitrile content, the better the resistance to oil and fuel
- At the same time, elasticity and resistance to compression set is adversely affected. In view of these opposing realities, a compromise is often drawn, and a medium acrylonitrile content selected
- Nitrile has good mechanical properties when compared with other elastomers and high wear resistance
- Nitrile is not resistant to weathering and ozone

Impermeability	Good
Oil Resistance	Excellent
Ozone Resistance	Poor
Set Resistance	Good to excellent
Tear Resistance	Fair to good

Heat Resistance:

Up to 212° F (100°C) with shorter life at 250°F (121°C).

Cold Flexibility:

Depending on individual compound, between -30°F and -70°F (-34°C and -57°C).

Chemical Resistance:

- Aliphatic hydrocarbons (propane, butane, petroleum oil, mineral oil and grease, diesel fuel, fuel oils)
- Vegetable and mineral oils and greases
- HFA, HFB and HFC fluids.
- Dilute acids,
- Alkali and salt solutions at low temperatures
- Water (special compounds up to 212°F (100°C))

Not Compatible with:

- Fuels of high aromatic content (for flex fuels, a special compound must be used)
- Aromatic hydrocarbons (benzene)
- Chlorinated hydrocarbons (trichlorethylene)
- Polar solvents (keytone, acetone, acetic acid, ethyleneester)
- Strong acids
- Brake fluid with glycol base
- Ozone, weather and atmospheric aging

Hand-cranked manual winches multiply your strength, allowing you to pull a relatively heavy load against gravity. Larger models have a lower gear ratio to multiply your strength even more. Winches also have a ratchet to hold the load at any point so it doesn't slide back, allowing a normal person to move a load, using a crank about a foot long and simple gearing.

***Load Capacity is based on the direct line pull on the first layer of the line on the drum. Capacity decreases as the line builds up on the drum.**

WARNING: WINCHES ARE NOT FOR THE MOVEMENT OF HUMANS OR FOR HOISTING LOADS OVER AREAS OCCUPIED BY HUMANS.

Hand Winches - General Purpose

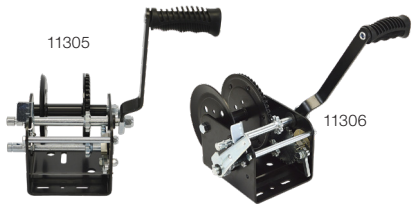

To be used with steel cable. Winch drums are drilled for use with winch straps.

- Solid carbon steel gears.
- Embossed frame for added strength.
- Baked black enamel painted finish.
- Supplied with grip handle and cable keeper.
- Two-way Ratchet.

Lightweight, compact and portable. Impact-resistant, rugged steel body construction. Features short, low effort, 360° rotating handle. Equipped with easy free chain, latch-type swivel hooks, and high-tensile alloy chain.

- Steel formed case to protect both gear and hand chain wheel slides against external shock.
- Double cover protection to stop moisture and dirt from entering into the hand chain wheel case and the brake cover.
- Brake mechanism will activate instantly when operation is stopped, whether the load is light or heavy.
- Double ratchet pawls for extra safety. Should one pawl fail, the other restrains the load.
- Powder metal bushing to increase mechanical efficiency and reduce the hand chain pull strength.
- Load chain guide & stripper to assure proper fit of load chain to load sheave. Also protects against dirt and moisture gathering in the load sheave.
- Slack end anchorage that serves as a limit stopper to prevent any accidents caused by over-lowering heavy loads.
- Grade 80 alloy load chain specially calibrated for hand chain block usage. All of the load chain meets or exceeds ISO and DIN standards.
- Hot forged, heat treated, swivel hooks with safety latches to ensure proper hooking to the load or sling.

Bronze Bushings

Bronze sleeve bushings or bronze bearings are hard and strong, as opposed to brass bushings, which are softer and more easily deform. Thus, bronze bushings have longer lifespans than brass bushing sleeves. They resist shock and impact, wear and corrosion.

They require an external lubricant, for example grease or oil, at installation and during operation to reduce friction and wear.

S.A.E. 841 Bronze material. Oil impregnated.

What are retainer rings?

Retainer Rings are precision engineered components that are designed to be applied on shafts or in bores and provide a shoulder that accurately positions, locates and retains other parts of an assembly. Many different types of retainer rings have been developed over the years, each a solution to a specific problem. Different types of rings are available to solve issues such as tolerance take-up, clearance diameter, thrust load capacity, flexible installation, rpm capacity, impact loading, non-removable lock-rings, groove-less push-on fastening and radial installation.

As an engineering concept, the retainer ring is still relatively young and has certainly not yet reached it’s peak of utilization as a retainer device.

How are retainer rings used?

Retainer Rings work by creating a shoulder that can hold components in place. The retainer shoulder is created when the ring attaches itself to the bore or shaft, typically by snapping into a groove. Ordinarily (however not always) a groove is dug into the shaft or bore, and this groove becomes the seat for the retainer ring.

Retainer rings are designed such that their contact diameter has some interference fit with the groove in which they fit. This creates a “snug” fit between the ring and groove. The term used to describe the amount of interference fit is “cling”.

Cling causes the retainer ring to fit tightly and securely against its groove bottom. Without cling a ring would have a loose fit and would “rattle” in its groove. This lack of cling would decrease the retention capacity of the ring because a “cling-less” ring is free to move radially, creating weak retention points that will ultimately cause the assembly to fail.

Another key factor is the width of the groove. The groove width is slightly larger than the rings thickness, thus creating a snug axial fit. The tight axial fit along with the cling to the groove bottom create a rigid shoulder which can retain thrust loads.
